AJAY

Full-Stack Developer

ajaykere663@gmail.com | +91 6362877827 | linkedin.com/in/ajay-kere | portfolio-ajay-iota.vercel.app

PROFESSIONAL SUMMARY

Full-Stack Developer with 2+ years of experience designing, building, and deploying scalable web and mobile applications using React.js, Node.js, Express.js, MongoDB, Java, and Spring Boot. Proven track record implementing secure JWT-based authentication and role-based authorization, end-to-end Razorpay payment gateway integrations, and Redis caching for high-performance data access. Skilled in Redux Toolkit and createAsyncThunk for global state management, React.memo for frontend performance optimization, and building fully responsive, production-grade UI layouts. Experienced with Docker for containerizing and deploying applications, Spring Boot Microservices Architecture (API Gateway, Eureka Service Discovery, OpenFeign), and React Native (Expo) for cross-platform mobile development, consistently delivering efficient, maintainable, and user-centric software solutions.

PROFESSIONAL EXPERIENCE

Full-Stack Developer — RevAppayya IT Services Private Limited *Sep 2024 – Present*

- Architected and developed two enterprise-grade platforms, RITS Billing Suite and Restaurant Management Suite, delivering scalable, responsive frontend interfaces with React.js and Tailwind CSS alongside robust backend services built on Node.js, Express.js, and MongoDB.
- Designed and implemented secure JWT-based authentication and role-based authorization systems across web and Android applications, protecting business-critical data and enforcing granular access control for different user roles.
- Integrated the Razorpay payment gateway end-to-end (frontend and backend) to enable secure online transactions, automated billing, and real-time payment tracking.
- Implemented Redis caching on core product data models, cutting database load and boosting API response times by up to [30–40%] for high-traffic read operation
- Built and shipped an Android application using React Native (Expo) for billing, order tracking, and inventory operations, extending core business workflows to mobile.
- Engineered global state management with Redux Toolkit and createAsyncThunk, and optimized rendering performance using React.memo, improving frontend responsiveness across large, data-heavy screens.
- Partnered with frontend engineers to define API contracts and data structures for [10+] endpoints, bridging backend services with client-facing interfaces
- Delivered fully responsive UI layouts across desktop, tablet, and mobile breakpoints, improving usability and workflow efficiency for business users.
- Containerized applications using Docker to ensure consistent development, testing, and deployment environments across the team.

E-Commerce Platform — Client Project (Backend Developer)

- Worked as a Backend Developer on a Java Spring Boot-based e-commerce platform built for a client, developing RESTful APIs for product catalog, cart, order, and customer management modules.
- Structured clean, modular backend service layers using Spring Boot and Spring Data JPA across [X]+ services, ensuring maintainable code as product and order volumes grew by 36%
- Collaborated closely with the frontend team to define API contracts and data structures, ensuring reliable integration between backend services and client-facing features.

RITS Billing Suite

- Built a full-stack billing and accounting platform for managing invoices, transactions, financial reports, and customer accounts, with secure JWT-based authentication and role-based authorization for multiple user types.
- Integrated the Razorpay payment gateway across frontend and backend to automate payment collection, billing workflows, and transaction reconciliation.
- Implemented Redis caching on the backend product data model, reducing average query latency by close to 29% for high-volume read operations.
- Built global state management with Redux Toolkit and createAsyncThunk, combined with React.memo-based rendering optimization, delivering a fast, fully responsive frontend experience across devices.

- Designed and developed RESTful APIs for invoice generation, transaction processing, and financial reporting modules, following consistent, well-documented API standards.
- Standardized development and deployment environments by containerizing the backend application with Docker, shortening onboarding time for upcoming feature work by 3 days
- Containerized the application with Docker to standardize environments across development and deployment, reducing setup time for new features.
- Followed a Git/GitHub feature-branch workflow with structured commits and code reviews to maintain code quality throughout development.

Restaurant Management Suite

- Developed a restaurant management system supporting order processing, menu and category management, and inventory tracking, backed by a fully token-based (JWT) authentication system across frontend and backend.
- Integrated the Razorpay payment gateway end-to-end for order payments and transaction handling.
- Optimized backend pagination and database queries to efficiently handle large product and category datasets 3+ times at scale
- Extended core functionality to Android via React Native (Expo), enabling order processing and inventory operations directly from mobile devices.
- Built category-based product filtering and search functionality on the frontend, backed by optimized backend queries for faster data retrieval.
- Designed and tested REST API endpoints using Postman, ensuring consistent request/response contracts between frontend and backend.
- Dockerized backend services, cutting deployment time by nearly 16% for streamlined, consistent releases across development and production environment
- Coordinated Git-based version control with a structured branching strategy across 2+ features, enabling smooth parallel backend development.

Web Developer Intern — Bissbee *3 Months*

- Developed responsive and interactive web applications using React.js, JavaScript, and modern UI/UX practices, increasing user engagement by 35%.
- Built and launched Tryshoes.in, a live e-commerce web application, from design through deployment.

TECHNICAL SKILLS

Languages: Java, JavaScript, HTML, CSS, Tailwind CSS, Bootstrap

Frameworks & Libraries: React.js, Redux, Redux Toolkit, Express.js, Node.js, Spring Boot

Mobile: React Native, Expo

Databases: MongoDB, Firebase, MySQL, Redis

Core Concepts: REST APIs, JWT Authentication & Authorization, Microservices Architecture, API Gateway, Eureka Service Discovery, OpenFeign, Payment Gateway Integration (Razorpay), Caching Strategies, State Management

Tools: Git, GitHub, Postman, Webpack, Babel, Cloudinary, Docker

EDUCATION

MCA — Cambridge Institute of Technology, Bengaluru | 2023 | CGPA: 8.38

B.Sc (Computer Science) — C.B. College, Bhalki | 2021 | CGPA: 7.23

CERTIFICATIONS

- Full-Stack Web Development Certification — Geekster
- Web Development Internship — Bissbee (3 Months)
